RECOMMENDED ADOLESCENT VACCINES AT A GLANCE

Three are recommended for first-time administration at 11-12 years of age:

- Meningococcal
- Tetanus, diphtheria, and pertussis (Tdap) booster
- Human papillomavirus (HPV)

“Catch-up” vaccines are recommended for adolescents who were not immunized or were underimmunized as infants and toddlers:

- Hepatitis B
- Polio
- Measles, mumps, and rubella (MMR)
- Varicella (chickenpox)

Two vaccines are recommended for adolescents with certain risk factors:

- Hepatitis A
- Pneumococcal polysaccharide

The influenza vaccine is recommended annually for all adolescents.

For more information about these recommended vaccines, and the diseases they protect against, visit adolescentvaccination.org/vpd.
